Github: https://github.com/sajalpatra Mobile: +91-8509970614

Passionate full-stack developer with hands-on experience in React Native, Next.js, and TypeScript. Seeking a React Native role to build high-performance cross-platform mobile applications and integrate modern AI-driven features.

Education

- **RCC Institute of Information Technology (RCCIIT)** Kolkata, India
  *Bachelor in Technology (Computer Science and Engineering); **CGPA: 8.46*** *July 2023 – Present*
- **Kalaberia Prasanna Kumar High School** Purba Medinipur, India
  *Higher Secondary (stream: science) ; **Percentage : 92%*** *Dec 2021 – Dec 2023*

Skills Summary

- **Languages**: JavaScript, TypeScript, HTML5, CSS3, Python, C, java.
- **Libraries and Frameworks**: React Native, React.js, Next.js, Redux, Node.js, Socket.io, Express.js,Chakra UI, Bootstrap, Tailwind CSS, Aceternity UI , Nest js , Vercel AI sdk , Langchain, Huggingface ,
- **Tools and Platforms**: VS Code, Netlify, Vercel, Git, GitHub, Firebase, Supabase, Postman, AWS . Slack .Claude Code.,convex.
- **Database**: MongoDB, MySQL, SQLite , Postgres .

Projects

CivicApp TypeScript, React Native, Expo, Next.js 15, Supabase, Clerk, Tailwind CSS, AWS S3/Cloudinary etc

- Complete Mobile App, Web Dashboard, and Backend Infrastructure
- Developed a dual-platform civic issue reporting system enabling citizens to report municipal problems (potholes, streetlights, waste) through a mobile app with offline support, while providing administrators a real-time analytics dashboard.
- Built intelligent features including duplicate detection using perceptual hashing (pHash) + geo-proximity, and auto-priority scoring algorithm that categorizes issues as urgent/high/medium/low based on category, location density, and time sensitivity.
- Implemented real-time subscriptions via Supabase for instant updates across all admin dashboards, with media optimization through AWS S3/Cloudinary for CDN delivery.
- Mobile app features one-tap reporting with GPS location tagging, push notifications, complaint tracking, and offline-first architecture that syncs when connectivity is restored.
- Working demo: sajalpatra/civic-app-2-
- web: sajalpatra/civic-web: civic-web admin dashboard web application, Civic-Web-App

MessMate TypeScript, React Native, Expo, Supabase, NativeWind, Reanimated.

- Full-Stack Mobile Expense Tracking App with Real-time Sync
- Built a group expense management app for roommates and travel groups to track shared costs, split expenses flexibly, and settle debts through an optimized payment algorithm.
- Implemented a greedy settlement engine that minimizes transactions needed to clear all group debts, plus three split modes (equal/custom/weighted) with multi-payer support.
- Designed real-time synchronization via Supabase subscriptions for instant cross-device updates, with push notifications for expense alerts and settlement reminders
- Built analytics dashboard with spending breakdowns, member comparisons, trend charts, and Excel export functionality—wrapped in a modern glassmorphic dark UI.

Expense Tracker AI

Next.js 16, TypeScript, React 19, Prisma, PostgreSQL, Clerk, Recharts, TailwindCSS 4

• Full-Stack Personal Finance Management App with Smart Analytics
• Built an intelligent expense tracking platform with secure authentication (Clerk), server-side rendering, and optimized database queries using Prisma ORM with PostgreSQL on Neon.
• Implemented 8 smart features: real-time budget tracking with alerts (green/yellow/red status), 6-month spending trends, category-based analytics, CSV export, and advanced search/filtering with multi-criteria support.
• Designed financial insights engine with month-over-month comparison, average daily spending calculations, and AI-powered tips—featuring interactive pie/line charts via Recharts and dark mode support.
• Architected with Next.js App Router using server actions for optimized performance, React Server Components for reduced bundle size, and responsive UI with glassmorphic design elements

Working demo: Expense Tracker - Manage Your Finances.
